Pulse code modulation PCM is a method used to digitally represent sampled analog signals. It is the standard form of digital audio in computers, compact discs, digital telephony, and other digital audio applications.

**Signals and Systems was developed in 1987 as a distance education course for engineers. An introduction to analog and digital signal processing including discrete and continuous time signals, linear time invariant systems, feedback and data processing.**

Linear filters process time varying input signals to produce output signals subject to the constraint of linearity. This results from systems composed solely of components or digital algorithms classified as having a linear response. Linear Systems and Signals 2nd Edition B P
