"Pressestimmen In short, Mark Lynas is a saint. (Dominic Lawson Sunday Times 2018-03-18)An excellent read, fluent, persuasive and surely right. (Evening Standard)Seeds of Science tells the [GMO] story from a unique perspective. The logic of Lynas's conversion is an implicit challenge to both the American right and the left. (The Washington Post)Gives readers a firsthand look at both sides of the discourse [...] The book begins with heart-racing accounts of the law-breaking activities Lynas engaged in [...] By the end of chapter 7, science has won the debate. (Science)Mark Lynas has written a rattling good account of his conversion from student activist to respected science writer. This is serious stuff, enlivened by all elements of a popular thriller. (John Deben Literary Review)The book is full of factoids that'll make you rethink a highly debated subject, and also what's really going on with those giant apples that don't bruise or brown. (bonappetit.com)Seeks to understand why greens, including Lynas himself, saw genetic engineering as an enemy from the very beginning [...] Lynas's experience suggests that the most important mind you can change is your own [...] Lynas has been through the fire to bring us this insight. (Grist)Partly a level-headed look at the benefits as well as the downsides of genetic modification, and partly a personal account of how Mark came to believe that the scientific method was, on the whole, not a bad way of analysing questions of crop production and farming. I found it riveting, largely because he writes so well and so open-mindedly, and I warmly recommend it. (Philip Pullman)Mark Lynas tells the remarkable story of a mass delusion fuelled by primitive folk-science intuitions, sacred values, and disinformation from some of our most sainted organizations. His exposé is an important contribution to an issue with enormous potential for benefiting humanity, and a gripping account of the tensions that can surround technological progress. (Steven Pinker, Johnstone Professor of Psychology, Harvard University, and the author of *The Better Angels of Our Nature* and *Enlightenment Now*)A gripping story of how a passionate troublemaker became an equally passionate campaigner for the facts. Seeds of Science is not only a compellingly-researched argument, it is the tale of how Mark Lynas's life changed. Reading it may change your life, too. (Tim Harford, author of *Fifty Things That Made the Modern Economy* and presenter of *More or Less*) Werbetext The inside story of the fight for and against genetic modification in food, from someone who's been on the front line of both sides of the argument Alle Produktbeschreibungen"
