The electrical grid goes everywhere—it's the largest and most complex machine ever made. Yet the system is built in such a way that the bigger it gets, the more inevitable its collapse. Named the greatest engineering achievement of the 20th century by the National Academy of Engineering, the electrical grid is the largest industrial investment in the history of humankind. It reaches into your home, snakes its way to your bedroom, and climbs right up into the lamp next to your pillow. At times, it almost seems alive, like some enormous circulatory system that pumps life to big cities and the most remote rural areas. Constructed of intricately interdependent components, the grid operates on a rapidly shrinking margin for error. Things can—and do—go wrong in this system, no matter how many preventive steps we take. Just look at the colossal 2003 blackout, when 50 million Americans lost power due to a simple error at a power plant in Ohio; or the one a month later, which blacked out 57 million Italians. And these two combined don't even compare to the 2001 outage in India, which affected 226 million people. The Grid is the first history of the electrical grid intended for general readers, and it comes at a time when we badly need such a guide. As we get more and more dependent on electricity to perform even the most mundane daily tasks, the grid's inevitable shortcomings will take a toll on populations around the globe. At a moment when energy issues loom large on the nation's agenda and our hunger for electricity grows, The Grid is as timely as it is compelling.

The grid provides a serviceable and populist introduction to electricity with a narrative grounded in people and stories rather than technical detail or engineering while schewes prose can tend towards the florid his great acplishment is in weighing the philosophical and moral implications of electricitys pervasiveness and convenience in parts of the world and its utter lack elsewhere. The grid is a deceptively simple productivity amp wellbeing tool to help you be your most productive self if you feel you need to find balance the grid can guide you to achieve this in your personal life family and relationships work and career or your academic studies the grid will support you in being the architect of your best life and teach you how to do it.
