The presentation style and format of the text portions were revised and standardised in the 12th edition and this style has continued through to the 13th edition. Compatibility information is organised in easy-to-follow sections. The tables of compatibility for the subject drug in infusion solutions and with other drugs in admixtures, syringes and during simultaneous administration through manifolds and Y-sites are

arranged by category. The section on products lists the sizes, strengths, volumes and pharmaceutical forms along with the other components of the formulation and instructions for reconstitution. The pH and the osmotic value of the resultant solutions are also presented along with miscellaneous information, such as sodium content. The aim of this book has remained unchanged over the years: to organise and summarise, in a concise and standardised format, the results of the primary research into drug stability and compatibility and to facilitate the use of parenteral drugs in clinical practice for the benefit of patients.
