A rocket has to have enough thrust to be able to lift up quickly and move against gravity the force of the thrust has to be strong enough to overcome the weight of the rocket drag is a force that pushes the rocket

backwards as it moves through the air. Rocket science is the science behind getting rockets into outer space more formally it is aerospace engineering the field requires a wide range of knowledge of physics aerodynamics mathematics propulsion dynamics and other types of science and math a rocket scientist or aerospace engineer may specialize in one or more fields of study and this will determine what kind of job he or she. Rocket pushes the water rapidly out through the nozzle sending the rocket rapidly into the air peak launch velocities can easily reach 30 metres per seconds about 60 miles per hour and without too much difficulty its

possible for a rocket to reach heights in excess of 30 m but launching a rocket straight up in the air can be dangerous. This activity involves shooting a rocket high into the air by rapidly squashing a plastic bottle launcher it s a great opportunity to challenge the old saying what goes up must e down you won t get this rocket into space but some real rockets do go fast enough to prove the saying wrong flexible plastic bottles such as milk. Dean pelton called the greendale school board to an emergency meeting in his office he informs them that city college is preparing to launch a space simulator program if they succeed they will get prestige and probably an increase in enrolment he suggests they counter it with a preemptive space simulator launch of their own to steal both possibilities away from city college.
