Thats something that will lead you to comprehend even more in the region of the planet, insight, specific areas, once history, amusement, and a lot more?.

An argument that what makes science distinctive is its emphasis on evidence and scientists' willingness to change theories on the basis of new evidence. Attacks on science have become commonplace. Claims that climate change isn't settled science, that evolution is "only a theory," and that scientists are conspiring to keep the truth about vaccines from the public are staples of some politicians' rhetorical repertoire. Defenders of science often point to its discoveries (penicillin! relativity!) without explaining exactly why scientific claims are superior. In this book, Lee McIntyre argues that what distinguishes science from its rivals is what he calls "the scientific attitude"—caring about evidence and being willing to change theories on the basis of new evidence. The history of science is littered with theories that were scientific but turned out to be wrong; the scientific attitude reveals why even a failed theory can help us to understand what is special about science. McIntyre offers examples that illustrate both scientific success (a reduction in childbed fever in the nineteenth century) and failure (the flawed "discovery" of cold fusion in the twentieth century). He describes the transformation of medicine from a practice based largely on hunches into a science based on evidence; considers scientific fraud; examines the positions of ideology-driven denialists, pseudoscientists, and "skeptics" who reject scientific findings; and argues that social science, no less than natural science, should embrace the scientific attitude. McIntyre argues that the scientific attitude—the grounding of science in evidence—offers a uniquely powerful tool in the defense of science.

Host veronica andrews sits with author lee mcintyre to discuss his latest book the scientific attitude defending science from denial fraud and pseudoscience an argument that what makes

That s the question that lee mcintyre considers in the scientific attitude defending science from denial fraud and pseudoscience mit press mcintyre a research fellow at the center for philosophy and history of science at boston university responded to questions about his new book via email. is the scientific attitude defending science from denial fraud and
pseudoscience attacks on science have bee monplace claims that climate
change isn t settled science that evolution is only a theory and that scientists
are conspiring to keep the truth about vaccines from the public are staples of
some politicians. Defenders of science often point to its discoveries penicillin
relativity without explaining exactly why scientific claims are superior in this
book lee mcintyre argues that what distinguishes science from its rivals is
what he calls the scientific attitude caring about evidence and being willing to
change theories on the basis of new evidence.

For mcintyre the claim that science is characterized by this attitude is a normative rather than a descriptive thesis he does not propose that the scientific attitude can serve as a demarcation criterion it is only a necessary and not a sufficient condition for something to be considered science he feels no need to show that everything with this attitude is science rather he aims to show only that without this attitude something is not a science

Macintyre is the co editor of three anthologies readings in the philosophy of
