The current voltage dependence is of the V n type the exponent n depends on the temperature and the width of the Gaussian distribution The current voltage dependence derived for the Gaussian trap energy distribution is formally identical with the case of exponential distribution of the trap density in energy. This chapter presents a discussion on current injection in solids through the regional approximation method Very substantial progress can be made by accepting a loss of accuracy in favor of an approximation scheme which not only brings the previously intractable problems back into the fold of analytic tractability but emphasizes the underlying physics of each problem in doing so.
