The Trojan Horse is a story from the Trojan War about the subterfuge that the Greeks used to enter the independent city of Troy and win the war. In the canonical version, after a fruitless 10-year siege, the Greeks constructed a huge wooden horse and hid a select force of men inside, including Odysseus.

The Trojan Horse is a crafty contraption that allowed the Greeks to put an end to the 10-year-old Trojan War. The wily Greek hero Odysseus conceived the project and design for the Trojan Horse. Epeus is credited with the actual building of the Trojan Horse.

A Trojan Horse is a type of malware that pretends to be something useful, helpful, or fun while actually causing harm or stealing data. Trojans are often silently downloading other malware, e.g., spyware, adware, ransomware, on an infected device as well.

Trojan, also called Trojan horse virus, is a type of malicious computer software (malware) disguised within legitimate or beneficial programs or files. Once installed on a user's computer system, the Trojan allows the malware developer remote access to the host computer, subjecting the host computer to a variety of destructive or undesired actions. Trojan horse definition: a gigantic hollow wooden horse left by the Greeks upon their pretended abandonment of the siege of Troy. The Trojans took it into Troy, and Greek soldiers concealed in the horse opened the gates to the Greek army at night and conquered the city. See more. A Trojan horse is a type of malware, not a virus. The Trojan horse virus can replicate itself, while the Trojan horse cannot do that. This is the very reason why many cyber criminals use various methods and tricks to delude users to install a Trojan horse into their endpoint.
