Buy paperback by simon for sale paperback by simon. Gardendome build your own geodesic dome. How to build a geodesic greenhouse budget101. Geodesic domes demonstrated and explained with cut out.

Mostly I just love food. It amazes me when I go to a shop and see the prices - how can farmers produce food so cheaply? If you have ever tried to grow your own food you know it takes a lot of work to germinate the seeds, nurture the young plants with warmth, water and light and then grow them on in a sometimes inhospitable environment full of slugs and snails and inclement and unpredictable weather. Economies of scale is one answer to the above question and the food you see in shops is mass produced, often with the aid of chemicals, and grown on soil which has had its mineral content so depleted that the resulting food is virtually nutritionally useless. For someone who wants whole food and enjoys the contact with nature that growing plants can give, a growing greenhouse is essential given the weather in the UK. So I made three different growdomes and this little book charts my journey into making my own perfect greenhouse growdome - a two-frequency, hemispherical icosahedron - with full instructions on how to make one for yourself on a small budget. For the price of a single, supermarket family shop you will be bringing home-grown, fresh and healthy food into your house all year round.
